

Karol Hryniewicki

Fricke Agricultural Machines from Mrągowo

Karol Hryniewicki and his brother Rafał run a farm with an area of 800 ha, which is focused on plant production. Mainly wheat, rape, corn. The farm is located in Prostki in the region of Warmia and Mazury, which is characterized by a variable climate as well as a variety of soils.

*"I saw the station for the first time in one of the branches of the John Deere dealer of Fricke Agricultural Machines from Mrągowo. I am an enthusiast of all kinds of technical innovations related to precision farming and I also use other precision farming solutions provided by JOHN DEERE. I became interested in the subject and read more about METOS solutions, as well as **Sebastian Bartkowicz from Fricke** gave me the necessary information and then I made a purchase.*

How often do you use the data?

"I use it before each planned operation in the field as well as in the event of upcoming weather threats. I also monitor the soil profile at a depth of 30 cm, thanks to which I always know perfectly well what the soil conditions are at a given moment."

Do you use the application on the smartphone?

"So very often."

Would you recommend the station to other farmers?

"The weather station is recommendable due to the versatile use of data for farm management."
