

## **API Product Manager (f / m / d)**

To strengthen the team, Pessl Instruments GmbH is looking for an API Product Manager (f/m/d) as the owner of the Application Programming Interface of the proprietary cloud ecosystem, managing the exchange of the data collected in real-time from millions of sensors connected to the METOS® IoT's, installed worldwide for smart agriculture, environmental monitoring, and city climate applications.

The owner of the "API as a Product" manages its lifecycle from new development to production release, documentation quality control, functionality demos deployments, and customer support. The mission will be ensuring the best friendly experience for the API users (from global business organizations to citizen data scientists) and enabling the digital integration of the METOS® by Pessl Instruments solutions in other partners' multi-cloud platforms.

### **WE OFFER**

- Agile, autonomous, and flexible teamwork
- Hybrid work (in-office, home-office)
- International experience and contacts
- Work on new technologies together with experienced colleagues
- Performance-linked wages, in line with the industry standard
- Internal and external training courses according to needs and development potential
- Full-time (38.5 hours/week) and long-term permanent employment
- 14 salaries and 5 paid weeks of holidays (including medical coverage and paid sick leave in compliance with state regulations)

### **WE EXPECT**

- Bachelor's degree in Computer Science or Engineering, Information Technology, or related field

- A Master´s degree (preferred but not mandatory)
- 5+ years of technology exposure
- Background knowledge of the agriculture technology sector is advantageous
- Excellent written and spoken English, German advantageous
- Good knowledge & understanding of principles of digital delivery and what factors contribute to a great digital experience
- Analytical skills with the ability to analyze opportunities from many angles (both quantitative and qualitative) and to drive appropriate performance tracking
- Knowledge of API security standards (such as OAuth 2.0)
- Understanding of API-related concepts and formats
- Understanding of partner-facing restT, GRPC APIs, and GraphQL
- Software coding knowledge such as Python, PHP, GoLang, or JavaScript is advantageous. Ability to analyze code and translate requisites into technical details and steps for the dev team. Ensure the adoption of best practices in code documentation and deploy functionality demos
- Knowledge of agile methodologies and SCRUM, product development, and release management
- Experience with tools like Jira, GitHub, or similar
- Product management experience and a comprehensive understanding of business principles & marketing principles are advantageous
- Ability to multitask, prioritize and manage time effectively
- Skilled at working effectively with cross-functional teams in a matrix organization
- Problem-solving attitude, with strong attention to detail without losing sight of the company's strategy
- Ability to lead teams in building new APIs, working closely with requirements analysts, developers, testers, and the customer in agile development practice
